strongly grounded in the scientific method and evidence the environment science issues and solutions presents an organized accessible building block approach that introduces the principles of ecology this book examines the effects of technology use and the unprecedented economic growth and development that has tipped the natural balance of the environment resulting in serious local

regional and global environmental problems this comprehensive text explores the need for interrelated long term solutions for the prevention and mitigation of environmental problems

a fascinating look at the historical relationship between environmental issues and scientific study social attitudes and public policy from the 17th century to the present the environment and science social impact and interaction explores the history of how science investigates nature and how those studies both shape and are shaped by the social attitudes philosophies and politics of their times it follows the changes in perceptions of the natural world and humankind s place in it from the european colonization of north america through the industrial revolution and westward expansion to the rise of the consumer economy and the recent hardening of the ideological battle lines over environmental policy coverage includes the emergence of ecology as a science and conservation as a movement the long history of conflicts between business interests and environmentalists and the role of scientific studies in debates over atomic and nuclear power pesticides toxic emissions and other human made sources of environmental degradation

this book reviews the role of plastics in society and examines the environmental impact of different types of plastics

the second edition of this fully integrated introductory text for courses in environmental studies and physical geography builds on the resounding success of the first edition providing a comprehensive account of modern environmental issues and the physical and socio economic framework in which they are set it explains the principles and applications of the different parts of the earth s system the lithosphere atmosphere hydrosphere and the biosphere and explains the interrelationships within and between these systems it explores the present environmental crisis examines how the planet earth fits into the wider universe and explores human environment interactions

explores the complex relationship humans have with the environment it is one of both responsibility including the sustainable or unsustainable management of natural resources and emotion like the elation gleaned from a beautiful landscape or the devastation experienced from a natural disaster human induced damage to the environment has widespread consequences for earth and its inhabitants that have already included sea level rise increased wildlife extinctions heatwaves droughts intensified air pollution and water shortages this book provides comprehensive coverage of the complex interactions between people and the environment it presents three clear honest and down to earth essays that cover

the devastating impact humans have on the environment the equally devastating impact the environment has on humans at times and the positive impact that increasing awareness of our effect on the planet is having on the movement to create a more sustainable future in addition in depth entries on 60 key environmental geography terms such as deforestation ecotourism and environmental justice provide a deeper dive into the topic 15 real world case studies on topics like the great pacific garbage patch and the great green wall of africa illustrate geography in action and 10 brief spotlights from around the world draw the reader in with relevant facts

nils petter gleditsch international peace research institute oslo prio department of sociology and political science norwegian university of science and technology trondheim this book could hardly have happened but for the end of the cold war the decline of the east west conflict has opened up the arena for increased attention to other lines of conflict in europe and at the global level environmental disruption not a new phenomenon by any means is a chief beneficiary of the shift in priorities in the public debate the scientific and environmental affairs division of nato has moved with the times and has defined environmental security as one of its priority areas for cooperation with central and eastern europe and countries of the former soviet union this book is the main output of an advanced research workshop arw held in bolkesjøl Norway 12-16 June 1996 i would like to acknowledge the personal support of I. Veiga da Cunha director of the priority area on environmental security research on these issues is now very much a collaborative effort across former lines of division in europe nato encourages indeed requires that this be reflected in the composition of the participants as well as the organizing committee this meeting was organized by a group of five people from five different countries lothar brock germany nils petter gleditsch norway thomas homer dixon canada renat perelet co director russia and evan vlahos usa

this volume focuses attention on key environmental and institutional changes associated with eastern expansion of the european union assessing and challenging prevailing views about the outcomes and processes of this historic development looking at four central themes capacity changes and limitations the eu's mixed messages and conflicting priorities non state actor roles and developments and the exchange of ideas and information the volume shows that enlargement will change the eu not just make it bigger and that eu officials and programs are improving aspects of environmental policy in cee countries even as they are making others less sustainable this book was previously published as a special issue of the journal environmental politics

the very survival of the planet is at risk human misuse of natural resources and disturbance of natural environmental systems is pushing the earth to the limits of its capacity this is an introduction for environmental study explaining how the environment functions how environmental systems relate and the ways in which people and environment interact focusing particularly on the environmental impacts of human activities the book explains the ways in which an understanding of basic physical principles can help us to use the environment and its resources three particular approaches are adopted throughout a systems approach highlighting the interactions and interrelationships between the environment s diverse parts an interdisciplinary perspective stepping back from individual subject focus to examine the complex breadth of the environment s diversity and a global perspective incorporating stimulating examples drawn from around the world to illustrate broad global patterns and contrasts

from the icy poles to the evergreen rainforests life has found a way to flourish in nearly every environment on earth this book explores the startling discoveries of new life forms in extreme environments such as the strange worlds of the ocean depths whilst marveling the world around us it also confronts the human impact on the environment the mounting evidence for global warming is explored and challenges us to work towards a more sustainable future packed with facts diagrams infographics and photos this is the perfect introduction to the wonder and intrigue of our environment

drawing a completely new road map toward a sustainable future jack m hollander contends that our most critical environmental problem is global poverty his balanced authoritative and lucid book challenges widely held beliefs that economic development and affluence pose a major threat to the world s environment and resources pointing to the great strides that have been made toward improving and protecting the environment in the affluent democracies hollander makes the case that the essential prerequisite for sustainability is a global transition from poverty to affluence coupled with a transition to freedom and democracy the real environmental crisis takes a close look at the major environment and resource issues population growth climate change agriculture and food supply our fisheries forests and fossil fuels water and air quality and solar and nuclear power in each case hollander finds compelling evidence that economic development and technological advances can relieve such problems as food shortages deforestation air pollution and land degradation and provide clean water adequate energy supplies and improved public health the book also tackles issues such as global warming genetically modified foods automobile and transportation technologies and the highly significant endangered species act

which hollander asserts never would have been legislated in a poor country whose citizens struggle just to survive hollander asks us to look beyond the media s doomsday rhetoric about the state of the environment for much of it is simply not true and to commit much more of our resources where they will do the most good to lifting the world s population out of poverty

this reader brings together material from ecological thought environmental policy environmental philosophy social and political thought historical sociology and cultural studies the extracts tell the story of the way the natural environment has been understood in the modern world and how this has recently been questioned as contemporary societies are seen as characterised by uncertainty and complexity the literature guides the reader through the conventional grounds for thinking about rights and obligations in relation to future generations non human animals and the biotic communities bringing each into question this then leads into a critical examination of social and political theories and their capacity for drawing on ecological thought each of the seven sections of readings is introduced by the editor who locates the set of readings within the specific themes and issues at the heart of each section this broad reaching and thought provoking set of readings stresses the diversity of response to environmental problems both within and between anthropocentric and ecocentric approaches and will encourage the reader to examine how they are manifested in the areas of environmental ethics policy analysis and social and political theory

from the authors of the leading environmental handbook green living the best of e s nationally syndicated q a column earthtalk knowledge of environmental issues and sustainability is increasingly important as industrialization and climate change continue to wreak havoc on our ecosystems and our psyche as temperatures rise and icecaps shrink and storms lash our coastal areas into oblivion being smart about carbon footprints waste streams and consumer choices becomes increasingly important for all of us that s where earthtalk comes in earthtalk gathers together the best of readers questions on the environment and the best ways to live green and answers in a quick and easy guide for the average joe or jane searching by subject or looking up questions in the index readers can learn everything from the difference between wild and farmed salmon to the pros and cons of nuclear power earthtalk provides the essential tools and tips to living in harmony with the planet

globalization is often discussed in terms of its ecological ramifications yet while ecological imbalance is today one of the greatest threats to mankind globalization is also a reality that is here to stay the volume therefore seeks to address how

globalizing and environmental interests can be reconciled the essays in this volume state that globalization can work both in favour of and against the environment the major issues discussed in this topical volume are how globalization can be used to promote environmental reforms the role of individuals private organizations and governments in keeping environmental degradation in check and in promoting environmental reform globalization and ecological inequality women the environment and globalization changing nature of environmental movements overpopulation and the ecology the relation between the ecology and the economy and the effects of global climate changes

first place winner of the society of environmental journalists rachel carson environment book award if you re looking for something to cling to in what often feels like a hopeless conversation schlossberg s darkly humorous knowledge is power eyes wide open approach may be just the thing vogue from a former new york times science writer this urgent call to action will empower you to stand up to climate change and environmental pollution by making simple but impactful everyday choices with urgency and wit tatiana schlossberg explains that far from being only a distant problem of the natural world created by the fossil fuel industry climate change is all around us all the time lurking everywhere in our convenience driven society all without our realizing it by examining the unseen and unconscious environmental impacts in four areas the internet and technology food fashion and fuel schlossberg helps readers better understand why climate change is such a complicated issue and how it connects all of us how streaming a movie on netflix in new york burns coal in virginia how eating a hamburger in california might contribute to pollution in the gulf of mexico how buying an inexpensive cashmere sweater in chicago expands the mongolian desert how destroying forests from north carolina is necessary to generate electricity in england cataloging the complexities and frustrations of our carbon intensive society with a dry sense of humor schlossberg makes the climate crisis and its solutions interesting and relevant to everyone who cares even a little about the planet she empowers readers to think about their stuff and the environment in a new way helping them make more informed choices when it comes to the future of our world most importantly this is a book about the power we have as voters and consumers to make sure that the fight against climate change includes all of us and all of our stuff not just industry groups and politicians if we have any hope of solving the problem we all have to do it together a compelling and illuminating look at how our daily habits impact the environment vanity fair shows how even the smallest decisions can have profound environmental consequences the new york times

with clarity and grace stephen bocking tackles the complicated question of the role of scientific expertise in environmental policy making nature s experts is a timely and important book david h guston author of between politics and science assuring the integrity and productivity of research this book by stephen bocking is as much about deliberative democracy as it is about science and the environment stephen bocking s treatment is deep perceptive and profoundly wise he has caught the heart of present and future environmental science politics and democratic governance c s holling the resilience alliance and emeritus professor arthur r marshall jr chair in ecological sciences at the university of florida if knowledge is power how should expert advice be deployed by a would be democratic society this perennial question is newly illuminated by this timely and wide ranging review of the role played by science in the making of environmental policy william c clark harvey brooks professor of international science public policy and human development harvard university john f kennedy school of government it seems self evident that science plays a central role in environmental affairs regulatory agencies businesses and public interest groups all draw on scientific research to support their claims some critics however describe science not as the solution to environmental problems but as their source moreover the science itself is often controversial as debates over global warming and environmental health risks have shown nature s experts explores the contributions and challenges presented when scientific authority enters the realm of environmental affairs stephen bocking focuses on four major areas of environmental politics the formation of environmental values and attitudes management of natural resources such as forests and fish efforts to address international environmental issues such as climate change and decisions relating to environmental and health risks in each area practical examples and case studies illustrate that science must fulfill two functions if it is to contribute to resolving environmental controversies first science must be relevant and credible and second it must be democratic where everyone has access to the information they need to present and defend their views
